

Alcohol Purge System

Instructions:

1. Connect short fuel line, with the female Quick Connector, to inlet side of fuel pump.
2. Connect the long piece of fuel line, with the male Quick Connector, to the kart fuel tank.
3. Connecting these 2 lines together, with the Quick Connectors, completes installation.
4. To purge the system:
 - a. Fill the Purge Can with gasoline.
 - b. Disconnect the Quick Connectors on the kart.
 - c. Quick Connect the Purge Can to the fuel pump line.
 - d. Start the engine to purge the system.
5. After purging the system disconnect the Purge Can. Elevate the female Quick Connector so that fuel will not spill out. The male Quick Connectors on the Purge Can and tank side of the fuel line have a shut-off to prevent spillage. Set the Purge Can aside in a safe place. You can now restart the motor to run off any additional gasoline in the line and carburetor. After running off the additional gasoline the Quick Connectors may be left disconnected until you are ready to race again.

NOTE: It is not recommended to disconnect the Quick Connectors while the engine is running.

**WARNING: BE SURE TO PROPERLY STORE THE PURGE CAN.
EMPTY AFTER EACH USE AND STORE IN A COOL, WELL VENTILATED PLACE.
KEEP PURGE CAN AWAY FROM HEAT AND OPEN FLAMES.
DO NOT USE PURGE CAN FOR STORING OR TRANSPORTING ANY FLUIDS.**
